

Mind, Culture, and Activity: Seminal Papers from the Laboratory of Comparative Human Cognition
By Michael Cole **Book Mind, Culture, and activity** The central theme of this discussion can be posed as a question: How shall we develop a psychology that takes as its starting point the actions of people participating in routine culturally organized activities? The discussion is organized in terms of a set of overarching themes of importance to psychologists and other social scientists: The nature of context; experiments as contexts; culture-historical theories of culture context and development; the analysis of classroom settings as a social important context of development; the psychological analysis of activity in situ; and questions of power and discourse. **Book Mind, Culture, and activity tracker** Mind Culture and Activity: Seminal Papers from the Laboratory of Comparative Human Cognition

MICHAEL COLE is university professor of communication and psychology at the University of California San Diego.
