Since you were still a kid you surely have been taught that the brain is the most critical organ of the human body. The brain is considered the king of all human organs thus making the nervous system as the most crucial bodily system, Through the brain the nervous system controls the functions of other body organs. Any damage to the human brain could have serious implications and effects on the functioning of other body organs and parts: It is no longer a surprise to hear doctors check on the head first before other parts of the body of a patient who just met an accident, In fact patients could be declared as brain-dead when their brain stops functioning, With your brain as your ally there is so much you could achieve, To fully understand how this essential organ works and how you could make it work to your advantage you should learn more about its anatomy. In general the brain is made up of three major components namely cerebrum cerebellum and brainstem, Each of these components has its corresponding distinct functions and roles: Balance and coordination would be the scope of responsibility of the cerebellum: It also takes charge of automatic physiological functions like blood pressure arousal and attention wakefulness and heart rate among many others.
